1. Project Overview

The Calculator App is a web-based application developed using HTML, CSS, and JavaScript. It allows users to perform basic arithmetic operations such as addition, subtraction, multiplication, and division. The application uses DOM Manipulation to update the display dynamically and show calculation results without reloading the page.

2. Features

- User-friendly interface
- Addition, subtraction, multiplication, and division
- Clear button functionality
- Error handling for invalid expressions
- Displays both expression and result (Example: 5+8 = 13)
- Responsive design

3. Technologies Used

Technology	Purpose
HTML	Structure of the webpage
CSS	Styling and layout
JavaScript	Calculator logic
DOM Manipulation	Dynamic display updates
GitHub	Source code hosting
GitHub Pages	Website hosting

4. Implementation

The calculator uses JavaScript functions to:

- Accept user input
- Perform calculations

- Display results
- Clear the display

DOM Manipulation is implemented using:

JAVASCRIPT:

```
let display = document.getElementById("display");
```

The display is dynamically updated whenever a user clicks a button.

7. Hosted Website Link

8. Conclusion

This project successfully demonstrates the use of HTML, CSS, JavaScript, and DOM Manipulation to create an interactive calculator. The application is hosted online using GitHub Pages and follows modern web development practices.
